1. The applicant is hereby notified that International Preliminary Examining Authority transmits here with the international preliminary examination report and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.
4. **REMINDER**
The applicant must enter the national phase before each elected office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details in the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1-44	YES
	Claims	None	NO
Inventive step (IS)	Claims	1-44	YES
	Claims	None	NO
Industrial applicability (IA)	Claims	1-44	YES
	Claims	None	NO

2. Citations and explanations (Rule 70.7)

Reference is made to the following document:

D: KR 2002-0029053 A (GIGALANE CO. LTD) 17. April 2002

D relates to a coaxial cable connector including an expansion pin which is electrically connected to a central conductor for impedance matching.

Claims 1-44 of the present invention relate to an SMA connector, a preferable embodiment of which comprises a body acting as ground, a central conductor located in the inner part of the ground, an insulator with a predetermined dielectric constant located between the body and the central conductor, a first step transition part formed in the body, and a taper, a slit and a slot formed in the central conductor in order to improve RF characteristics. Therefore, the present invention differs in regards to using the component of an expansion pin. The components of the present invention's taper, and slit and slot cannot be found either in the above cited document nor within conventional techniques. Accordingly, the present invention is considered to be novel and to involve an inventive step.
